**Cost - FREE!**

*The Seattle Area Soaring Society invites you to a day of R/C Discus Launch Gliders*

Everyone is welcome to come out and learn about this exciting aspect of Radio Controlled Soaring... Where state-of-the-art gliders are launched by the pilot's arm and controlled by radio transmitters as they soar in thermals high above the field.

This clinic/workshop/symposium will offer something for everyone. From those who have never flown R/C before to those who have flown for years and are looking to improve their skills to the next level... oh and by the way the clinic is FREE!

SASS has gathered some of the top HLG pilots in the region to help you learn how to get to that next level. If you have an HLG charge it up and bring it out... if you don't, no problem, there will still be lots to learn. and we'll even help you get a plane trimmed-out. We'll also have some planes available to try-out with a flight instructor on a buddy-box.

There's lots more information about the clinic, including directions to the field on our website: [www.seattleareasoaringociety.com](http://www.seattleareasoaringociety.com)
